Next steps

You've completed a full course on using, enhancing, and interacting with Large Language Models with a strong foundation on the basics of Generative AI. In this reading, you will find other Coursera content that you can explore, organized by topics.

This course is part of the LLMOps specialization which explores more scenarios with Large Language Models like using the Azure or AWS clouds, and using Open Source models.

Take the next steps in working more with programming languages like Python or Rust, and do more concrete and actionable work and projects by completing full coursers or specializations.

Machine Learning

- Python Fundamentals: Introductory course to using Python, that helps you deploy a container to Azure as the last step
- MLOps tools: MlFlow and Hugging Face: Uses the most popular tools for deploying and consuming Machine Learning Models

Data Engineering

- Python and Pandas for Data Engineering: Explores the basics of Pandas with Python in this foundational course
- Scripting with Python and SQL for Data Engineering: From loading data in different formats to doing web scrapping at scale, this course will help you
