Course 1 Roadmap

AWS Generative AI for Developers:

Getting Started with AWS Generative AI for Developers

This course introduces developers to the fundamentals of building with generative AI on AWS using Amazon Bedrock. You'll learn how to invoke foundation models through simple API calls, experiment with multiple model providers, and apply prompt engineering techniques to guide model outputs. The course also explores inference strategies, content guardrails, and the tools available to accelerate development, including Amazon Q Developer. By the end, you'll be equipped to start building and scaling generative AI applications using AWS-managed services—without needing to manage infrastructure.

MODULE 01

What is Generative AI?

- Amazon Bedrock
- Amazon Q Developer
- Foundation Models
- Prompt Management
- Model invocation
- Model providers

MODULE 02

Accessing Amazon Bedrock Foundation Models

- Bedrock Runtime APIs
- Access methods (Console, SDK, CLI)
- Asynchronous and batch inference
- Guardrails
- Model selection
- Prompt engineering
