Done

Making a connection from Python

In this assignment, you will get the code for https://www.pg4e.com/code/simple.py (https://www.pg4e.com/code/simple.py?PHPSESSID=98e2f1c04e73205f9a3449c15c57f9e4) working. Download these files using **wget**, **curl** or your browser. If you are using a bash shell in Linux, these commands might work:

```
wget https://www.pg4e.com/code/simple.py
wget https://www.pg4e.com/code/hidden-dist.py
```

Rename **hidden-dist.py** to **hidden.py -** if you are using bash shell in Linux, use the **mv** command:

```
mv hidden-dist.py hidden.py
```

Edit **hidden.py** and put your conection details in the **secrets()** function.

Host: pg.pg4e.com

Port: 5432

Database: pg4e_402ae32925

User: pg4e_402ae32925

Password: (hide/show copy)

Check Answer

Here is the the **psql** command to access your database:

```
psql -h pg.pg4e.com -p 5432 -U pg4e_402ae32925 pg4e_402ae32925
```

Please enter your Python code in the space below the assignment instructions.

The **simple.py** code will load its secrets from **hidden.py** when you run it. Don't worry about fixing the "mistake" it is just there to show how bad SQL causes a traceback.

```
$ python3 simple.py
Done
DROP TABLE IF EXISTS pythonfun CASCADE;
CREATE TABLE pythonfun (id SERIAL, line TEXT);
SELECT id, line FROM pythonfun WHERE id=5;
Found (5, 'Have a nice day 4')
New id 11
SELECT line FROM pythonfun WHERE mistake=5;
Traceback (most recent call last):
  File "simple.py", line 66, in
    cur.execute(sql)
psycopg2.errors.UndefinedColumn: column "mistake" does not exist
LINE 1: SELECT line FROM pythonfun WHERE mistake=5;
                                         ^
```

Once this runs, you should have some records in the **pythonfun** table - and this is what the autograder is looking for. You can check that the records are in the table by using **psql** and running:

```
SELECT line FROM pythonfun WHERE line LIKE 'Have a nice%';
```

This is the query that the autograder runs and looks for at least one row.
