Done

Inserting a sequence of numbers in Python

In this assignment, you will write a Python program to insert a sequence of 300 pseudorandom numbers into a database table named **pythonseq** with the following schema:

```
CREATE TABLE pythonseq (iter INTEGER, val INTEGER);
```

You should drop and recreate the **pythonseq** table each time your application runs.

Host: pg.pg4e.com

Port: 5432

Database: pg4e_402ae32925

User: pg4e_402ae32925

Password: (hide/show copy)

Check Answer

Here is the the **psql** command to access your database:

```
psql -h pg.pg4e.com -p 5432 -U pg4e_402ae32925 pg4e_402ae32925
```

Please enter your Python code in the space below the assignment instructions.

The following Python code will generate your series of pseudo-random numbers:

```
number = 644052
for i in range(300) :
    print(i+1, number)
    value = int((value * 22) / 7) % 1000000
```

Here are some of the numbers in the sequence:

Done

```
1 644052
2 24163
3 75940
4 238668
5 750099
6 357454
7 123426
8 387910
9 219145
10 688741
100 485663
200 45873
300 45873
```

As a foot note, the value **22/7** is a fun rational number with a lot of digits after the decimal point that is surprisingly close to the value for pi (Π).

Please enter your Python code here:
