Explainability Report

Global dataset report

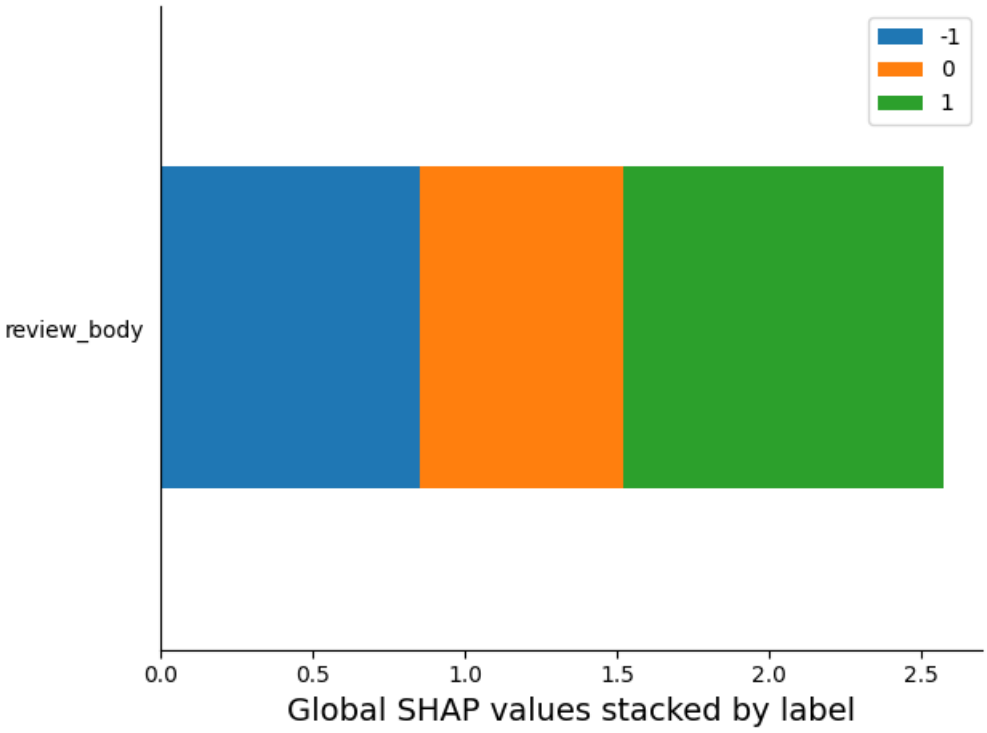

This report is the output of the Amazon SageMaker Clarify analysis. The report is split into following parts:

1. Model explanations

Model explanations

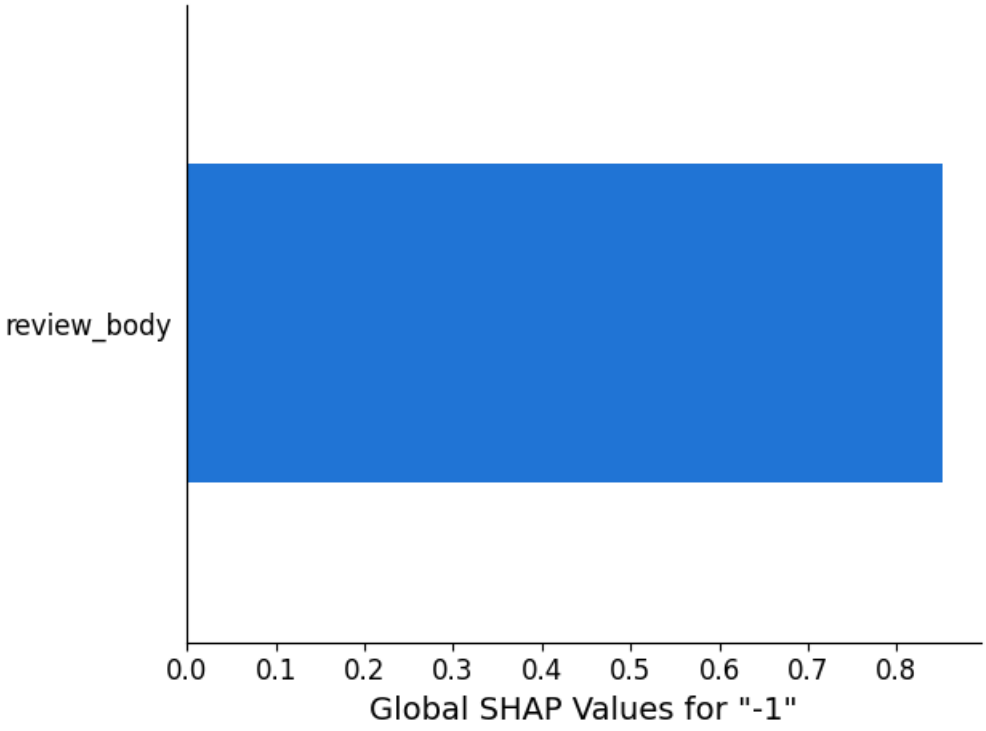

SHAP Explanations for all labels

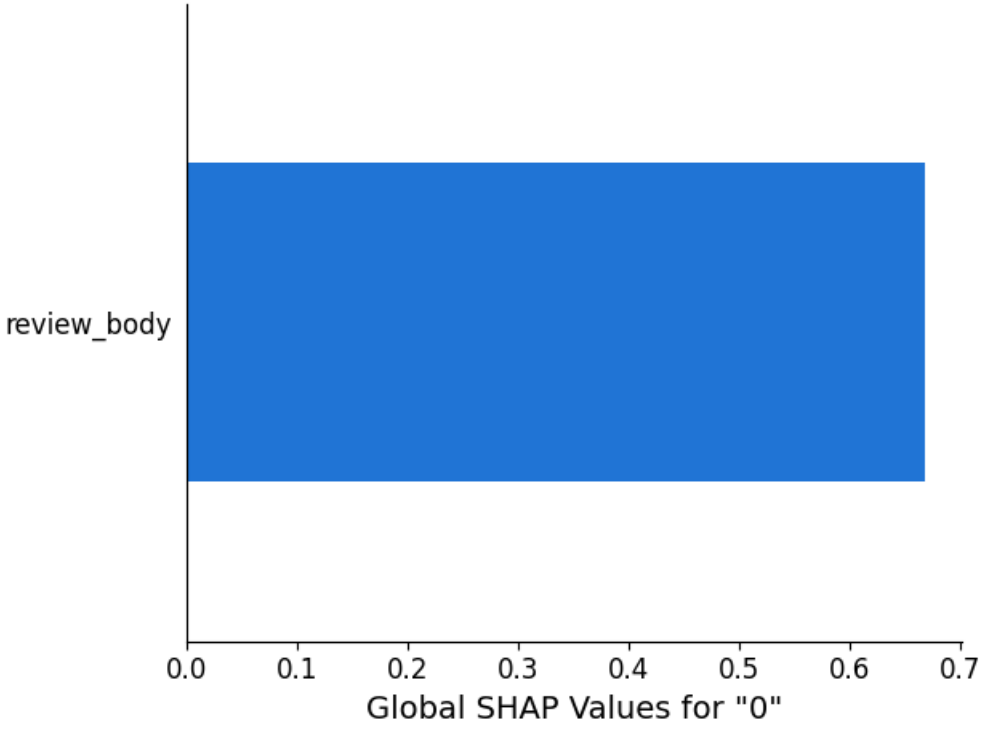

The Model has `1` input features and `3` output labels. We computed KernelShap on the dataset and display the `10` features with the greatest feature attribution summed up over all the labels.

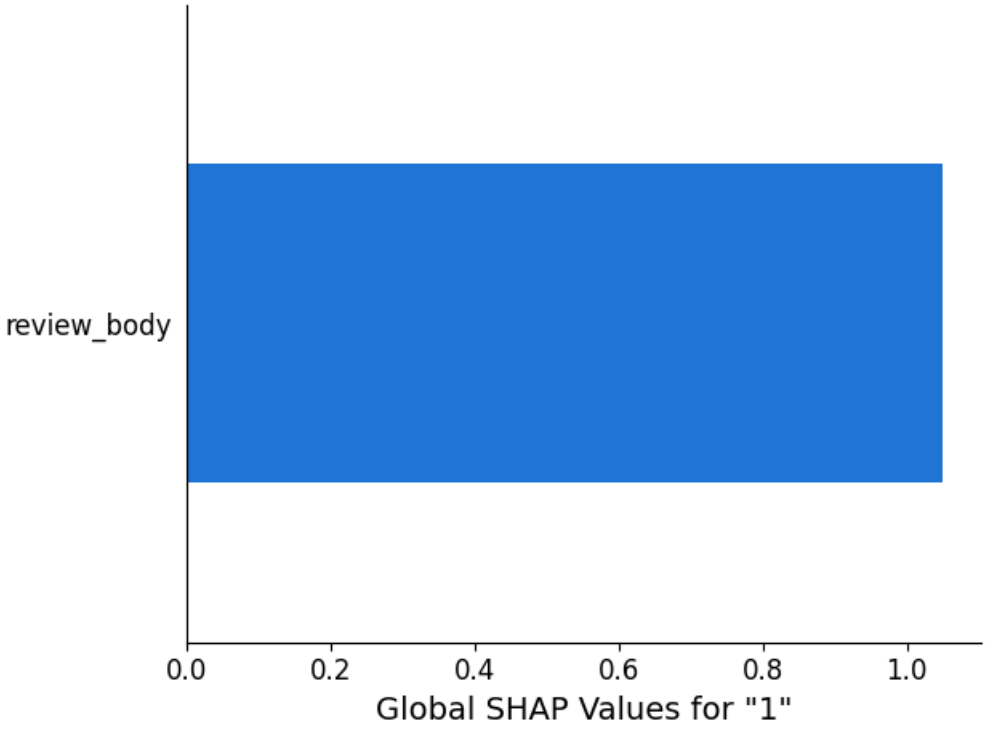

SHAP Explanations for individual labels

We computed KernelSHAP explanations on the dataset. For each label, we display the `10` features with the greatest feature attribution. You have `3` label(s).
