Done

Entering Many-to-One Data - Automobiles

This application will create two tables, and hand-load a small amount of data in the the tables while properly normalizing the data. Once you have placed the proper data in the tables, press the button below to check your answer.

Host: pg.pg4e.com

Port: 5432

Database: pg4e_2165bd5291

User: pg4e_2165bd5291

Password: pg4e_p_4e15809518c8d6 (hide/show copy)

Check Answer

Here is the the **psql** command to access your database:

```
psql -h pg.pg4e.com -p 5432 -U pg4e_2165bd5291 pg4e_2165bd5291
```

Here is the structure of the tables you will need for this assignment:

```
CREATE TABLE make (
    id SERIAL,
    name VARCHAR(128) UNIQUE,
    PRIMARY KEY(id)
);

CREATE TABLE model (
  id SERIAL,
  name VARCHAR(128),
  make_id INTEGER REFERENCES make(id) ON DELETE CASCADE,
  PRIMARY KEY(id)
);
```

Insert the following data into your database separating it appropriately into the **make** and **model** tables and setting the **make_id** foreign key to link each model to its corresponding make.

make	model
Aston Martin	DB9 Volante Manual
Aston Martin	DBS

Aston Martin	DBS Coupe
BMW	528i
BMW	528i Sport Wagon

Done

To grade this assignment, the program will run a query like this on your database and look for the data above:

```
SELECT make.name, model.name
    FROM model
    JOIN make ON model.make_id = make.id
    ORDER BY make.name LIMIT 5;
```
