Done

Making a Stored Procedure

In this assignment you will create a table, and add a stored procedure to it.

Host: pg.pg4e.com

Port: 5432

Database: pg4e_3774c65c52

User: pg4e_3774c65c52

Password: (hide/show copy)

Check Answer

Here is the the **psql** command to access your database:

```
psql -h pg.pg4e.com -p 5432 -U pg4e_3774c65c52 pg4e_3774c65c52
```

Create this table:

```
CREATE TABLE keyvalue (
  id SERIAL,
  key VARCHAR(128) UNIQUE,
  value VARCHAR(128) UNIQUE,
  created_at TIMESTAMPTZ NOT NULL DEFAULT NOW(),
  updated_at TIMESTAMPTZ NOT NULL DEFAULT NOW(),
  PRIMARY KEY(id)
);
```

Add a stored procedure so that every time a record is updated, the **updated_at** variable is automatically set to the current time. This was covered in the lecture materials. The auto grader will insert some records, then update them and check to see if **updated_at** is updated appropriately.
