Done

Regular Expressions

In this assignment you will create a regular expression to retrieve a subset data from the **purpose** column of the **taxdata** table in the readonly database (access details below). Write a regular expressions to retrieve that meet the following criteria:

Lines that are all upper case letters and spaces and nothing else

As an example (not the solution to this assignment), if you were looking for lines where the *very first* character was an upper case character letter you would run the following query:

```
SELECT purpose FROM taxdata WHERE purpose ~ '^[A-Z]' ORDER BY purpose DESC LIMIT 3;
```

The autograder will add all the SQL - all you need is to enter the appropriate regular expression below.

Enter a regular expression like ^[A-Z]...

Submit Query

Here are the first few lines:

1. YOUTH WRITING WORKSHOPS ACADEMIC SUPPORT
2. YOUTH WRESTLING CLUB SUPPORTED YOUTH WRESTLING
3. YOUTH WORK THERAPY PROGRAMS

Here are access details for a readonly database:

```
Host: pg.pg4e.com
Port: 5432
Database: readonly
User: readonly
Password:   (hide/show copy)

psql -h pg.pg4e.com -p 5432 -U readonly readonly
```

Here is the schema for the **taxdata** table:

```
readonly=# \d+ taxdata
